Abstract of JP 7079423 (A)

PURPOSE: To improve the ability of controlling the contents of video presentation by a user by extracting and searching information carried by the closed caption part of television signals and finding a program interested in by a viewer.

CONSTITUTION: A control program stored in a computer 104 takes out a closed caption digital text stream relating to the segment immediately before of video first. The text stream is transmitted to the computer 104 by a closed caption decoder 103 and the received text is kept inside a storage device 105. The control program decides whether or not the logged text stream matches with a specified search reference. Then, the control program identifies the segment of the television signals. Then, the viewer edits the television numbers.
